

FQA Tester

FQA – Gurgaon, India Office

Job Title:	FQA Tester	Department:	FQA
Location:	Gurgaon office	Reports to:	FQA Sr. Tester / Test Lead
Responsible for:	None/ Team/ Testers		
Job Purpose			
The Games QA Tester will be responsible for ensuring the quality of motion sensor based mobile games on iOS, Android and Web platforms; Testing of video games on PC /game consoles. You will be working in an energetic and highly creative environment along with a group of highly talented, passionate, and successful individuals			
Scope of Role			
• The job entails testing games software and identifying and reporting bugs and issues, following a structured testing methodology to the highest possible specified quality standards, and always in full compliance to defined information security policy and controls. • This involves testing the game in a systematic way, based against defined set of criteria, identifying problems and communicating those issues via bug tracking databases and other mechanisms back to the Quality Assurance Coordinator. • You will test for bugs in the software, from complete crashes to minor glitches in the code. You also act as the game's first audience, often being asked to report on its playability, and identifying any aspects which could be improved. • The Tester will also be responsible for providing feedback where any test cases, templates or tools used are in need of improvement. • Helping our clients pass their products through the certification/submission process smoothly and painlessly is number one priority.			
Key Responsibilities and Activities			

- Review game design and requirements documents and develop test plans
- Test and report issues using JIRA, an issue tracking system used by the company.
- Work with the production team on prioritizing the issues.
